

20 Progress Drive Morrisville, PA 19067 215-736-1126 215-736-1128 [fax]

Product Data Sheet

Product TPV-53A0RX

ColorRx®

Biocompatible, 53 Shore A TPV alloy that is suitable for overmolding for healthcare applications. Adheres well to PP.

PHYSICAL	Test Method	Typical Values, Units	7/5/2012		
Specific Gravity	ASTM D792	.89 g/cm 3			
Melt Flow Rate		g/10 min			
Mold Shrinkage Linear Flow (0.125)		in/in			
Water Absorption @ 24 hrs		%			
IMPACT	Test Method	Typical Values, Units			
Izod Impact Strength	ASTM D624	120 ft-lb/in			
Notched (73 F) (-22 F)		ft-lb/in			
MECHANICAL	Test Method	Typical Values, Units			
Tensile Strength @ Yield**		psi			
Tensile Strength @ Break**	ASTM D412	520 psi			
Elongation @ Yield*		%			
Elongation @ Break*	ASTM D412	610 %			
Flexural Strength***		psi			
Flexural Modulus***		psi			
HARDNESS	Test Method	Typical Values, Units			
Hardness Shore A	ASTM D2240	53			
THERMAL	Test Method	Typical Values, Units			
DTUL @		°F			
IGNITION CHARACTERISTICS	Test Method	Typical Values, Units			

UL File Number Flame Rating - UL

The values shown are typical values that have been obtained using test bars molded from laboratory samples and are not intended for specification purposes. These values are for natural colors only. Addition of pigments may alter some values. Inasmuch as LTL Color Compounders has no control over the use to which others may put the material, it does not guarantee that the same results as those described here in will be obtained. Each user of the material should make his own test to detail the material's suitable to detail the material's suitable to the mate particular use. Statements concerning possible or suggested uses of the materials described herein are not to be construed as constituting a license under any LTL Color Compounders patent covering such use or as recommendations for use of such materials in the infringement of any patent. These are developmental products with estimated physical property profiles. Actual values will need to be determined upon production of material.

^{* %} elongation values are calculated from the elongation of the entire bar at 2.0 in/min

^{***} Tensile strength values are calculated at 2.0 in/min
*** Flexural data is calculated at 2.0 in/min
